THE PROBLEM

\$1B+

lost to MEV every year.

Existing solutions protect transactions

—

not the AI strategies that produce them.

● ACTIVE THREAT

01 Front-Running

Transactions visible in the mempool before execution. Bots see your trade before it settles.

02 Leaked AI Strategies

Routing logic exposed through API logs and traffic analysis. Your alpha is not yours.

03 No Real Privacy

"Private" APIs are policy promises. One breach and your strategy is public forever.

FOUNDER STORY

I kept seeing the same gap.

I've shipped MeeGames (raised **\$100K**) and ShillTube (launched on COTI blockchain with **\$10K** in funding). Both taught me the same thing: the moat isn't the product – it's the proprietary logic behind it.

In DeFi, that logic – the AI strategy – has zero protection. Existing solvers protect the transaction. Nobody protects the intelligence that created it.

That gap is VeilSolver.

THE INSIGHT

"Privacy in DeFi has always been a policy promise."

VeilSolver makes it an architecture guarantee. Enforced by cryptography and hardware – not operator honesty.

THE SOLUTION

VeilSolver: Private intent solver.

Encrypted intents · TEE-computed execution plans · Atomic settlement on OG Chain

CAPABILITY	TRADITIONAL SOLVER	PRIVATE RPC	VEILSOLVER
Protects transaction	✓	✓	✓
Hides mempool exposure	✗	✓	✓
Protects AI strategy	✗	✗	✓
Hardware enforcement	✗	✗	✓
Verifiable onchain	✗	✗	✓
Private strategy registry	✗	✗	✓

Three steps. Zero leaks.

01

Build & Encrypt

Intent encrypted ECIES client-side with the solver's enclave public key. The solver never sees plaintext – not even in transit.

02

TEE Inference

AI computes the execution plan inside an Intel TDX enclave on 0G Compute. Strategy logic is private by hardware. Host OS cannot read enclave memory.

03

Atomic Settlement

Plan verified via ECDSA on 0G Chain. minAmountOut enforced by VeilSolver.sol. Replay protection via onchain intent mapping.

→

0G Chain

Your AI strategy. Private by hardware.

Protocols write proprietary execution rules – routing preferences, risk limits, slippage thresholds. ECIES-encrypted before upload. Stored on OG Storage. Only the TEE enclave can decrypt.

- ✓ Operator **CANNOT** read strategy contents
- ✓ Competitors **CANNOT** infer routing logic
- ✓ strategyId is public – blob is **encrypted**
- ✓ Intel TDX hardware boundary – key **never exported**

FLOW

- ① Author writes system prompt
- ② ECIES encrypt in browser
- ③ Upload to OG Storage
- ④ strategyId returned (root hash)
- ⑤ TEE fetches + decrypts at trade time
- ⑥ **Strategy runs inside enclave only**

"IP-protected by Intel TDX. Not by contract. Not by policy."

INFRASTRUCTURE

Built on OG – all three layers.

Pull any one layer out – the privacy guarantee breaks.

OG COMPUTE

Sealed AI inference · Intel TDX · GLM-5-FP8

TeeML hardware attestation – verifiable chatIDs emitted onchain. The only AI compute network where inference is cryptographically provable. Our trust root.

OG STORAGE

Encrypted audit trail · Content-addressed · Immutable

Every solve hashed to a merkle root. Emitted in IntentExecuted events – queryable from chain. No secondary index needed.

OG CHAIN

Settlement layer · EVM Cancun · chainId 16602

ecrecover enforces solver ECDSA signature. executedIntents mapping blocks all replays. minAmountOut enforced – MEV bounded.

TRACTION

3 live integrations. 10+ in pipeline.

INTEGRATING NOW

SealMind

AI TRADING AGENT

Private strategy execution for their AI trading agent. Alpha stays inside TEE – not exposed to the solver operator.

YieldBoost

YIELD OPTIMIZATION

Encrypted yield optimization intents. Position sizing logic protected from MEV and competitors.

Daimon

INSTITUTIONAL ROUTING

Custom strategy registry for institutional routing. IP enforcement without trusted intermediary.

Pipeline: AI Agents · Yield Protocols · Trading Desks · DEX Aggregators · Cross-chain Bridges

10+ further

Four revenue streams. All protocol-native.

01 - PROTOCOL FEE

10 bps per executed swap

Collected in VeilSolver.sol before DEX route. Onchain, automatic, non-negotiable.

Per transaction

02 - STRATEGY REGISTRY

Premium strategy tiers

Higher replica count, priority TEE queue, SLA guarantees for institutional strategies.

Subscription / per-upload

03 - ENTERPRISE SOLVER

White-label deployment

Dedicated enclave, custom fee splits for institutional trading desks and hedge funds.

Annual contract

04 - SDK LICENSING

Open-core model

Core SDK free. Enterprise features (audit API, analytics, multi-chain) paid.

Per-seat / usage

10K daily swaps at \$0.10/swap → **\$365K ARR**

100 protocols × \$500/mo → **\$600K ARR**

5 enterprise desks → **\$250K ARR**

The market is already here.

\$1B+

MEV EXTRACTED ANNUALLY

Flashbots data. This is the visible damage – strategy leakage has no number yet.

\$50B+

DAILY DEX VOLUME

Addressable at 10 bps per swap. Volume already exists – we capture protocol fees.

3x

AI-DEFI TVL GROWTH YoY

\$2.4B TVL in AI-driven protocols. Every one needs strategy privacy.

Target segments: **AI Trading Desks** · **Yield Aggregators** · **DeFi Protocols on OG** · **Institutional Entrants**

ROADMAP

Shipped. Scaling. Sovereign.

V1 - LIVE NOW

- ✓ Encrypted intents, TEE inference
- ✓ ECDSA signing + VeilSolver.sol
- ✓ OG Storage audit trail
- ✓ Strategy Registry
- ✓ TypeScript SDK published
- ✓ SealMind · YieldBoost · Daimon

V2 - Q3 2026

- Enclave-generated solver key
- Signed oracle price feeds (Chainlink)
- Multi-route split execution
- Strategy analytics dashboard
- Mainnet on OG Aristotle

V3 - Q4 2026

- On-chain TDX attestation
- Cross-chain settlement
- Institutional compliance toolkit
- Token economics + staking
- OG ecosystem incentive program

TEAM

Solo. Shipped. Scaling.

Two shipped products with real capital raised. Pattern: identify a genuine gap, ideate fast, ship before anyone else frames the problem.

VeilSolver – full stack, one hackathon sprint. TEE pipeline, smart contract, SDK, frontend, 3 partnerships.

\$100K

MeeGames raised

\$10K

ShillTube on COTI

3rd product

Infrastructure layer

UNFAIR ADVANTAGE

- ✓ Prior shipping track record in web3
- ✓ Speed: identify gap → ship → distribute
- ✓ Deep OG stack fluency from day one
- ✓ 3 integrations closed during hackathon

"Judges bet on founders, not just ideas."

VeilSolver

Privacy is an architecture property.

Not a policy promise.
